Report on Industrial Visit (FYMBA)

On 22nd February 2025, a group of 120 second-semester students from the MBA programs of Vidyabharti Trust College of master in Computer Application, Umrakh, Bardoli, accompanied by two faculty members, visited the Sugar Factory in Bardoli, Gujarat. The primary aim of this industrial visit was to provide students with practical exposure to the operations of a large-scale manufacturing industry, specifically in the sugar production sector. Upon arrival, the students were welcomed by the factory staff and given a detailed tour of the various departments within the factory. They observed the entire process of sugar production, from the initial crushing of sugarcane to the boiling, clarification, and crystallization stages, ultimately leading to the drying and packaging of the final product.

During the visit, the students had the opportunity to engage with factory experts, including engineers and operations managers, who explained the technical aspects of the production process, as well as the challenges faced by the industry. The factory's use of advanced technology for automation and efficiency, as well as its sustainable practices like waste management and water recycling, were key highlights of the tour. In addition, the students participated in an interactive session, where they were encouraged to ask questions about the real-world application of their academic knowledge and its relevance to the industry.

The visit provided valuable insights into the sugar production process and its impact on the local economy, offering students a deeper understanding of how industries operate and the role technology plays in improving productivity and sustainability. Feedback from both students and faculty was overwhelmingly positive, with students appreciating the chance to witness first-hand the complexities of industrial operations. This visit was an enriching experience, reinforcing the importance of bridging theoretical learning with practical industry exposure.
